

FIG. 1A

FIG. 1B

Figure 1. The effect of the concentration of the *Agrobacterium* suspension on the transformation efficiency of *Agrobacterium* strains. The *Agrobacterium* strains were incubated with the plant explants for 24 h. The explants were then cultured on the selective medium. The number of explants transformed was counted. The results are shown as the mean \pm SD of three independent experiments. The data were analyzed by the Student's *t*-test. The differences between the control and the experimental groups were significant at $p < 0.05$.
